Hex-Net Pro

The HEX-NET interface brings wireless connectivity to VCDS running on a Windows PC. It also includes VCDS-Mobile, which brings dealer-level diagnostics for VW-Audi Group cars to most modern mobile devices such as smartphones and tablets without the need to install any software on those devices.

The HEX-NET WiFi Interface with VCDS-Mobile® built in will turn most smart devices with WiFi and a web browser into a factory level diagnostic tool for VW, Audi, Seat or Skoda automobiles. It will also work with VCDS running on a Windows® PC.

Compatible with:

- Microsoft Windows® versions from XP through the current Windows 8
- Apple iPad®, iPhone®, etc.
- Most Android® phones and tablets
- Blackberry Z10®, Q10®, etc.
- Microsoft Surface® & Windows Phone®
- KindleFire®, etc.

Features:

- Plugs directly into 1996 through current model year cars; works with all diagnostic-capable VW/Audi cars, even the latest models which require a direct CAN connection and use the UDS/ODX protocol.
- Acts as a "dongle"
- Activation for the full-function version of VCDS and for VCDS-Mobile is built in. Use the HEX-NET with VCDS on a Windows PC or with VCDS-Mobile on almost any smart device, no activation codes required.
