- Eltrac Communication Interface
- OBD-II cable
- USB cable

Description:

- Iveco Eltrac Bluetooth Module enables wireless communication between vehicles and diagnostic computers and simplifies and accelerates repair operations in workshops.
- A truck must be able to handle business-critical transports on a 24/7 basis. So fast, accurate error detection and correction is crucial for service technicians.
- The Bluetooth module is a solid, reliable solution that currently is used in thousands of repair shops worldwide. Launching new functions, features, and technologies in existing solutions is always a challenge.

Wireless Connection:

- Allows you to carry out Active Diagnosis' by local checking the activation and the working of the components without the help of other operators.
- A better ergonomic design for easier operation without the hindrance and limitations of the cable.
- Check the parameters of the vehicle on-board systems during the dynamic functional tests.

Languages Supported:

- English
- German
- French
- Polish
- Turkish
- Spanish
- Italian
